

Hey!

I just wanted to add that the Sprint Backlog needs to include one improvement from the Sprint Retrospective with regards to how the team works. This is to ensure that each sprint is focussing on continuous improvement!

"To ensure continuous improvement, it includes at least one high priority way in which the team works, identified in the previous Retrospective meeting."

An example of this (from my previous projects) could be a decision to focus on :

- changing the room that Daily Scrum is held in to a more quiet one,
  - fixing a server that could speed up development,
  - building an automated test framework for higher quality, or
  - requesting that another team do not interfere with an important server during important demos
- every sprint meeting with another team regularly to share knowledge

I hope it helps

Paul.
